DETAILED ACTION

Applicant's election without traverse of Claims 1-6 in Paper No. 7 is acknowledged.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1,3,4 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 3 and 5 recite "a color difference" between "a color" and "a color of a standard substance" having a value of at least 30. Not only has "a color" been introduced in the claims more than once, making it very confusing and improperly drafted, but also the claims are indefinite and confusing to the examiner. Additionally, it is unclear what "a value of at least" 30/10 refers to. Since the claims have been rendered indefinite, examination has been completed only as best understood by the examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Asada (JP 10204155 A).

Regarding claims 1,2,3,5 and 6, Asada discloses:

An epoxy resin (See abstract) sealing a chip including a filler containing 15 wt.% with respect to total filler and having particles of no more than 10 μ m in size; and a laser mark (YAG laser) on the package.

Regarding the limitations reciting the difference in color and its value, see that the device disclosed by the prior art meets the structural characteristics recited in the claims. It is inherent from this that it will display the same "colorimeter value" claimed.

Regarding claim 4, the claim recites product by process limitations. A "product by process" claim is directed to the product per se, no matter how actually made, In re Brown, 173 USPQ 685; In re Luck, 177 USPQ 523; In re Fessmann, 180 USPQ 324; In re Avery, 186 USPQ 161; In re Wertheim, 191 USPQ 90 (209 USPQ 554 does not deal with this issue); In re Marosi et al, 218 USPQ 289; and particularly In re Thorpe, 227 USPQ 964, all of which make it clear that it is the patentability of the final product per se which must be determined in a "product by process" claim, and not the patentability of the process, and that an old or obvious product produced by a new method is not patentable as a product, whether claimed in "product by process" claims or not. Note that applicant has the burden of proof in such cases, as the above case law makes clear.
